About this publication

This publication is an overview of the z/OS® Font Collection, which is a base element of z/OS Version 2 Release 1 and later. The z/OS Font Collection includes information about basic concepts for fonts, and describes Advanced Function Presentation (AFP) outline fonts and raster fonts, WorldType fonts, and code pages. The z/OS Font Collection contains a comprehensive set of fonts that replaces the fonts from these IBM® products:

- AFP outline fonts from Infoprint Fonts for z/OS, Version 1 Release 1 (5648-E76)
- AFP raster fonts from:
 - AFP Font Collection, Version 2 Release 1 (5648-B33)
 - APL2® Fonts, Version 1 Release 1 (5771-ADB)
 - Data1 Fonts, Version 1 Release 1 (5771-ADA)
 - Sonoran Sans Serif Font, Version 1 Release 1 (5771-ABB)
 - Sonoran Sans Serif Condensed Font, Version 1 Release 1 (5771-AFL)
 - Sonoran Sans Serif Expanded Font, Version 1 Release 1 (5771-AFN)
 - Sonoran Sans Serif Headliner Font, Version 1 Release 1 (5771-ADX)
 - Sonoran Serif Font, Version 1 Release 1 (5771-ABA)
 - Sonoran Serif Headliner Font, Version 1 Release 1 (5771-ADW)
- WorldType fonts (TrueType and OpenType fonts) from Infoprint Fonts for Multiplatforms, Version 1 Release 1 (5648-E77)

The z/OS Font Collection also includes:

- A complete set of IBM expanded core fonts
- A set of legacy Math, PI, and Sonoran 240-pel raster fonts
- Compatibility fonts, which are also a feature of Print Services Facility™ (PSF) for z/OS (5655-M32) in Version 4 Release 5 and earlier

Who needs to read this publication

This publication is intended for users of z/OS who need to understand font concepts and the different types of fonts in the z/OS Font Collection.

How this publication is organized

These chapters help you obtain the information that you need about the z/OS Font Collection:

- Chapter 1 summarizes the contents of the collection and lists highlights about it.
- Chapter 2 introduces and illustrates the basic concepts used with fonts.
- Chapter 3 describes AFP font structure, naming conventions, and character set format.
- Chapter 4 describes the outline fonts: General Library fonts and Chinese, Japanese, and Korean (CJK) fonts.
- Chapter 5 describes the raster fonts: single-byte character set (SBCS) fonts; double-byte character set (DBCS) fonts; Math, PI, and Sonoran fonts; and Compatibility fonts.
- Chapter 6 describes the code pages and extended code pages.
- Chapter 7 describes the WorldType fonts.

This publication also includes an accessibility appendix, notices, and index.

Related information

For more information about character sets, code pages, coded fonts, and TrueType and OpenType fonts, see these publications:

- *IBM AFP Fonts: Technical Reference for Code Pages*, which provides in-depth expanded core font information that includes character set attributes, tables that show all AFP characters, and the language complements that contain them.
- *IBM Infoprint Fonts: Japanese Font Library Technical Reference*, S544-5849, which provides technical details for the Japanese character sets and code pages.
- *IBM Infoprint Fonts: Korean Font Library Technical Reference*, S544-5850, which provides technical details for the Korean character sets and code pages.
- *IBM Infoprint Fonts: Simplified Chinese Font Library Technical Reference*, S544-5851, which provides technical details for the Simplified Chinese character sets and code pages.
- *IBM Infoprint Fonts: Traditional Chinese Font Library Technical Reference*, S544-5852, which provides technical details for the Traditional Chinese character sets and code pages.
- *Using OpenType Fonts in an AFP System*, G544-5876, which explains how to install and reference TrueType and OpenType fonts in Microsoft Unicode format on systems that use AFP architecture to print or display data.
- *Font Object Content Architecture Reference*, which contains the architecture definition and describes the functions and elements that make up the Font Object Content Architecture (FOCA). See [AFP Consortium Publications \(afpcinc.org/publications\)](http://afpcinc.org/publications) for this reference.

For information about all z/OS product publications, see [z/OS Information Roadmap](#). For more information about z/OS, see the [z/OS home page \(www.ibm.com/systems/z/os/zos\)](http://www.ibm.com/systems/z/os/zos).

How to send your comments to IBM

We invite you to submit comments about the z/OS product documentation. Your valuable feedback helps to ensure accurate and high-quality information.

Important: If your comment regards a technical question or problem, see instead [“If you have a technical problem”](#) on page xi.

Submit your feedback by using the appropriate method for your type of comment or question:

Feedback on z/OS function

If your comment or question is about z/OS itself, submit a request through the [IBM RFE Community](#) (www.ibm.com/developerworks/rfe/).

Feedback on IBM Knowledge Center function

If your comment or question is about the IBM Knowledge Center functionality, for example search capabilities or how to arrange the browser view, send a detailed email to IBM Knowledge Center Support at ibmkc@us.ibm.com.

Feedback on the z/OS product documentation and content

If your comment is about the information that is provided in the z/OS product documentation library, send a detailed email to mhvrcfs@us.ibm.com. We welcome any feedback that you have, including comments on the clarity, accuracy, or completeness of the information.

To help us better process your submission, include the following information:

- Your name, company/university/institution name, and email address
- The following deliverable title and order number: z/OS Font Collection, GA32-1048-30
- The section title of the specific information to which your comment relates
- The text of your comment.

When you send comments to IBM, you grant IBM a nonexclusive right to use or distribute the comments in any way appropriate without incurring any obligation to you.

IBM or any other organizations use the personal information that you supply to contact you only about the issues that you submit.

If you have a technical problem

If you have a technical problem or question, do not use the feedback methods that are provided for sending documentation comments. Instead, take one or more of the following actions:

- Go to the [IBM Support Portal](http://support.ibm.com) (support.ibm.com).
- Contact your IBM service representative.
- Call IBM technical support.

Summary of changes

This information includes terminology, maintenance, and editorial changes. Technical changes or additions to the text and illustrations for the current edition are indicated by a vertical line to the left of the change.

z/OS Version 2 Release 3 (V2R3)

The following content is new, changed, or no longer included in z/OS Version 2 Release 3.

New

- “[APL2, DATA1, Math, PI, and Sonoran fonts](#)” on page 76 is updated with these fonts:
 - APL2
 - DATA1
 - Sonoran Sans Serif
 - Sonoran Sans Serif Condensed
 - Sonoran Sans Serif Expanded
 - Sonoran Sans Serif Headliner
 - Sonoran Serif
 - Sonoran Serif Headliner
- “[Highlights for WorldType fonts](#)” on page 122 is updated for Version 8.2 of the WorldType fonts.

Changed

- “[About this publication](#)” on page ix is updated.
- Compatibility fonts are only a feature of Print Services Facility (PSF) for z/OS (5655-M32) in Version 4 Release 5 and earlier. See [Chapter 5, “AFP raster fonts,”](#) on page 45.

z/OS Version 2 Release 1 summary of changes

See the Version 2 Release 1 (V2R1) versions of the following publications for all enhancements related to z/OS V2R1:

- *z/OS Migration*
- *z/OS Planning for Installation*
- *z/OS Summary of Message and Interface Changes*
- *z/OS Introduction and Release Guide*

Chapter 1. Introduction

The z/OS Font Collection is a base element of z/OS that consists of character sets, coded fonts, and Advanced Function Presentation (AFP) code pages. You can use the z/OS Font Collection to print standard documents by using familiar typefaces such as Helvetica, Times New Roman, and Courier. You can use the code pages to print in more than 50 languages.

To support certain applications or the low-resolution Intelligent Print Data Stream (IPDS), the z/OS Font Collection includes AFP raster fonts. AFP outline fonts, which are also delivered as part of the z/OS Font Collection, can be substituted for raster fonts in certain situations to enable higher resolution output. In addition, the z/OS Font Collection provides WorldType fonts, which are TrueType and OpenType fonts that deliver the greatest flexibility for designing documents with exactly the appearance you want.

Highlights

The z/OS Font Collection includes fonts that:

- Control the appearance of business communications.
- Enhance the readability of business documents to increase impact and accessibility.
- Draw attention to specific items, create emphasis, and improve readers' responsiveness to business communications.
- Apply industry-standard TrueType and OpenType font technology to support Unicode data for globalization of applications with a single font.
- Improve print quality on high-resolution printers by using AFP outline fonts or TrueType and OpenType fonts instead of raster fonts.

Fonts included in the collection

The z/OS Font Collection includes:

- AFP outline fonts (see [Chapter 4, “AFP outline fonts,”](#) on page 17)
- AFP raster fonts, including a complete set of IBM expanded core fonts, a set of Math, PI, and Sonoran 240-pel raster fonts, and compatibility fonts (see [Chapter 5, “AFP raster fonts,”](#) on page 45)
- TrueType and OpenType fonts (see [Chapter 7, “WorldType fonts,”](#) on page 121), including a prebuilt resource access table (RAT) that can be used for AFP printing

Where to find fonts

The AFP outline and raster fonts are found in these locations:

AFP outline fonts

SYS1.SFNLIB

240-pel bounded box AFP raster fonts

SYS1.FONTLIBB

240-pel unbounded box AFP raster fonts

SYS1.FONTLIB

240-pel Chinese, Japanese, and Korean (CJK) raster fonts

SYS1.SFONDLIB

300-pel AFP raster fonts

SYS1.FONT300

The latest version of WorldType fonts and symbolic links are found as UNIX files (Hierarchical File System (HFS) or z/OS File System (zFS) files) in this location:
`/usr/lpp/fonts/worldtype`

IBM provides extended code pages as downloadable .zip files. To download the files, see [IBM Extended Code Pages \(ECPs\) zip files \(www.ibm.com/support/docview.wss?uid=psd1P4000878\)](http://www.ibm.com/support/docview.wss?uid=psd1P4000878).

Chapter 2. Font concepts

A font is a collection of graphic characters that share the same type family, style, and weight. You can use a font for an entire data set or file, for an entire page, or for selected lines or fields of data on a page. Page printers can print fonts with various point sizes, styles, weights, and widths on a single line or on various lines on a page. Multiple fonts can be printed on a page. Before each page is printed, the fonts that are required for the page are downloaded to the printer if the printer does not already have them in its storage. The printer storage that is required for a font depends on the point size (for raster fonts), number of characters in the font, and whether the font is double-byte or single-byte.

To understand fonts, you need to be familiar with basic font concepts, including font terminology, how font characters are represented, the characteristics of font spacing, and point and pitch sizes.

Font terminology

Fonts are defined with this font terminology:

Type family

A *type family* is a group of typefaces that share basic design characteristics and encompass many size and style variations. Examples of type families include:

- Courier
- Helvetica
- Times New Roman

Typeface

A *typeface* is a collection of characters that have the same style, weight, and width. Examples of these attributes are shown in [Figure 1 on page 4](#).

- *Style* is the inclination of a letter around a vertical axis; for example, roman (upright) or *italic* (slanted).
- *Weight* is the degree of boldness of a typeface; for example, medium or **bold**.
- *Width* is the horizontal variation in a character design; for example, normal or condensed.

Type font, type size, and complement

A *type font*, or font, is a collection of characters that share the same type family, typeface, and type size. Collections of characters for expanded core fonts are referred to as *complements*.

Note: In Type Transformer, complements are called *character lists*.

[Figure 1 on page 4](#) shows the basic components of the Helvetica type family, including typeface (style, weight, width), complement, type font, and type size.

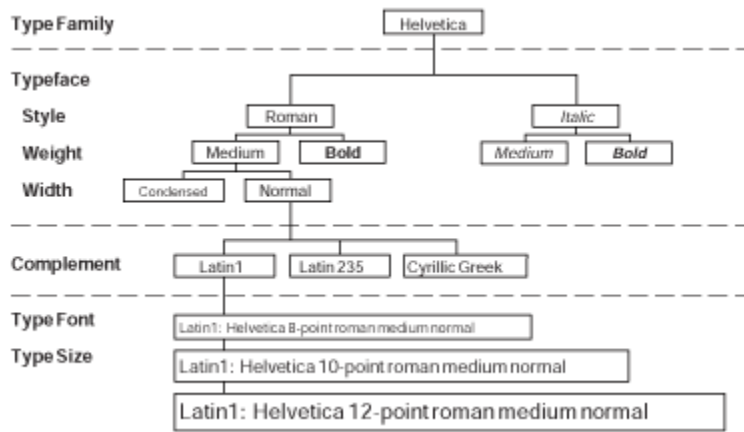

Figure 1: Helvetica type family

Representation of characters

An important concept to understand is how fonts are represented. For the fonts printed by page printers that use AFP licensed programs, characters are represented by data that describes each dot to be printed (raster fonts) or by mathematical formulas (outline fonts).

Raster fonts

A raster font is created by a sequence of dots, called *picture elements* (pels), that form a character that is called a *raster pattern*. The number of dots per inch that a printer generates is called the *print resolution*, or density. A resolution of 240 pels means that a printer prints 240 pels per inch both vertically and horizontally, or 57,600 pels per square inch (240 × 240).

Figure 2 on page 4 shows two images of different print resolutions. The image with many small dots has more pels per inch and greater print resolution than the image with fewer large dots.

Figure 2: Print resolution examples

The ability to print at a specific pel density is determined by the type of printer. Because raster fonts can have 240-pel or 300-pel formats, different fonts are available for printers with different resolutions (for example, 240-pel and 300-pel printers).

Outline fonts

Characters in outline fonts are described by mathematical formulas rather than by pels. These formulas are used by rasterizing software to create bitmap characters that are based on two variables: resolution and point size. This means that a single outline font can offer many print resolutions and point sizes. "Hints" are also contained in the outline fonts to make sure that typographic characteristics of the typeface are maintained in a consistent manner throughout all printed characters. Some of these characteristics include horizontal and vertical stroke widths, serifs, and curve radii.

TrueType and OpenType fonts are outline fonts that consist of tables for identifying the formatting information that is used to support Unicode encoding.

Rotation of characters

The ability to print in different directions and with different character rotations is also determined by the type of printer. *Print direction* shows the direction in which characters are added to a line of text. *Character rotation* is the clockwise rotation of a character in regards to the character baseline. The

character baseline is a reference on which characters are aligned as they are added to the page in the print direction. The character baseline is always parallel to the print direction.

Figure 3 on page 5 shows a table of how print direction and character rotation can be combined to print in many orientations.

Print Direction	Character Rotation (in degrees)			
	0	90	180	270
Across (0)	ABCD	⋈ B C D	⋈ D C B A	⋈ C B D
Down (90)	⋈ C B A	⋈ B C D	⋈ D C B A	⋈ A B C D
Back (180)	⋈ C B A	⋈ D C B A	⋈ D C B A	⋈ C B A
Up (270)	⋈ C B A	⋈ D C B A	⋈ B C D	⋈ C B A

Figure 3: Print direction and character rotation combinations for print orientations

Font spacing characteristics

Fonts can be classified according to their spacing characteristics and by their format.

Uniformly spaced fonts

Uniformly spaced fonts, or monospaced fonts, are similar to typewriter fonts, for which each character increment¹ is the same width. Thus, the lowercase *i* and the . occupy as much space as the uppercase *M*. Examples of uniformly spaced fonts include Courier and Letter Gothic:

```
i.M.i.M.i.M.i.M.i.M.i.M.i.M.
```

Duospace fonts

Duospace fonts are similar to uniformly spaced fonts. Duospace fonts can be two character widths instead of a single character width. Ideographic characters are designed on full-width increments while other characters can be designed for half-width increments. This concept allows the half-width and full-width characters in the box size examples in [Figure 8 on page 8](#) to be implemented in a single font.

Note: As more language support is implemented in duospace fonts, more character widths can be used. However, the characters widths are always a multiple of the half-width character increment. This function allows a monospaced appearance of the data by using this font spacing.

Typographic fonts

Typographic fonts are proportionally spaced fonts. The character increment is part of the design and varies on a character-by-character basis. Thus, the lowercase *i* and the . occupy narrow spaces. The uppercase *M* occupies a wide space. Examples of typographic fonts include Helvetica and Times New Roman:

```
i.M.i.M.i.M.i.M.i.M.i.M.i.M.
```

Pitch

Uniformly spaced fonts are often described or referred to in *pitch*, or the number of characters that are printed in one horizontal inch ([Figure 4 on page 6](#)). Pitch is also referred to as characters per inch (cpi).

¹ A character increment is the distance that the current print position is increased for the particular character printed.

Figure 4: Type size in pitch

Points

All fonts are measured in *points*, the vertical size of the font. One inch is equal to approximately 72 points. Point size is a baseline-to-baseline measurement, which includes minimal white space. The *baseline* is the line upon which the characters rest. Thus, the actual height of the characters in an 18-point font is less than 18 points (Figure 5 on page 6). The line spacing usually includes one or more points of white space between lines of type.

Figure 5: Type size in points

Box size

Double byte character set (DBCS) raster fonts were formerly measured in *box size*, the number of pels in the character box. Box size can be either a horizontal or a vertical measurement. Usually both dimensions are given, with the box width first. If only one dimension is given, it is the box height. In full-width fonts, the box width is usually equal to the box height. In half-width fonts, the box width is one-half the box height.

Point and pitch sizes

Uniformly spaced single-byte character set (SBCS) fonts are measured horizontally in pitch and specified as points in the coded font or character set name. Proportionally spaced and mixed-pitch fonts are measured vertically in points. Although the DBCS fonts are uniformly spaced, they are measured vertically in points.

This information shows examples of various point and pitch sizes.

Point examples

Point size is a vertical measurement.

Chapter 3. AFP Fonts

To understand fonts in the z/OS Font Collection, you must be familiar with AFP fonts. AFP fonts are Font Object Content Architecture (FOCA) raster and outline fonts, which are single-byte or double-byte, or WorldType fonts, which are TrueType and OpenType outline fonts. For more information about FOCA structures, see *Font Object Content Architecture Reference*, S544-3285. For more information about TrueType and OpenType fonts, see *Using OpenType Fonts in an AFP System*, G544-5876.

This information describes AFP font structures, AFP font naming conventions, and formats of AFP character sets.

AFP font structure

The font structure of FOCA outline and raster fonts is made up of these font components (see [Figure 9](#) on page 9):

Coded font

A coded font consists of a character set and a code page.

Character set

A character set specifies characters, character properties, and printing attributes.

Code page

A code page defines character IDs and code points.

Figure 9: Font components

WorldType outline fonts are organized by subsets and grouped by character blocks as defined by Microsoft Unicode format. Instead of using a character set, WorldType fonts map a code page to a Unicode point or use an extended code page that contains the Unicode point.

Coded font

In FOCA font structure, a *coded font* pairs a specific code page with a specific character set and translates your request for type (for example, text you previously entered at a computer terminal) into characters for printing. A character must be included in the specified character set and listed on the specified code page before it can be printed.

Character set

In FOCA font structure, a *character set* corresponds to the definition of a font; it contains the characters of a single type family, typeface, and type size. In addition, a character set specifies character properties and printing attributes (see [Figure 10](#) on page 10).

Note: WorldType outline fonts are not defined with character sets.

Figure 10: Composition of a character set

The character set components are:

Characters

Characters are letters, numerals, punctuation marks, or other symbols of a font.

Character properties

Character properties detail how a character is positioned relative to the characters around it. Some character properties include:

- The baseline of a character that shows its general alignment
- The dimensions of space in which the character is printed
- The position of the character in that space
- The identifier of the character

Printing attributes

The printing attributes define how the character set is printed. Some printing attributes include rotation of characters, maximum ascender, and point size.

One of the character properties is the *character ID* (or graphic character ID). Each character is assigned a character ID; for example, the character "A" is assigned the character ID LA020000. The purpose of a character ID is to distinguish the character from similar characters. For example, these characters look similar, but are assigned different character IDs:

Minus sign (-)

Character ID SA000000

Hyphen (-)

Character ID SP100000

Em dash (—)

Character ID SM900000

For a list of character IDs, the character the ID represents, and the code pages where the characters are found, see the *IBM AFP Fonts: Technical Reference for Code Pages, S544-5802*.

Code page

A *code page* maps each character of text to the characters in a character set for FOCA fonts or the characters that are associated to a Unicode point for WorldType fonts. Two types of code pages exist:

- A *traditional code page* contains the mapping information between a code point and a character ID; it can be used with FOCA character sets and TrueType and OpenType fonts.
- An *extended code page* contains the mapping information for a code point, a character ID, and a Unicode point; it can be used with TrueType and OpenType fonts.

A *character ID* is an 8-byte character data string. A *code point* is an 8-bit binary number that represents a character. Code points are usually shown as hexadecimal representations of their binary values.

Table 1: Code point representations	
Numeral system	Value
Binary	11000001

Numeral system	Value
Decimal	193
Hexadecimal	C1

When a code page is used with a FOCA character set, as you enter your text at a computer terminal, each keyboard character is translated into a code point. When the text is printed, each code point is matched to a character ID on the code page you specified. The character ID is then matched to the image (*raster pattern* or *outline pattern*) of the character in the character set you specified. The image in the character set is the image that is printed in your text. To be a valid code page for a particular character set, all character IDs in the code page must be included in that character set (Figure 11 on page 11).

Figure 11: Translation of a keyboard character into a printed character with a code page and FOCA character set

When a code page is used with a TrueType and OpenType font, each code point is matched to the character ID on the code page you specified. The character ID is matched to a Unicode point on the graphic character global identifier to Unicode mapping (GUM) table on your printer. The Unicode point is then matched to the image of the TrueType and OpenType font you specified (Figure 12 on page 12).

Figure 12: Translation of a keyboard character into a printed character by using a code page and a TrueType and OpenType font

When an extended code page is used with a TrueType and Open Type font, each code point is matched to a Unicode point on the extended code page you specified without referring to the GUM on your printer. The Unicode point is then matched to the image of the TrueType and OpenType font you specified (see Figure 13 on page 12).

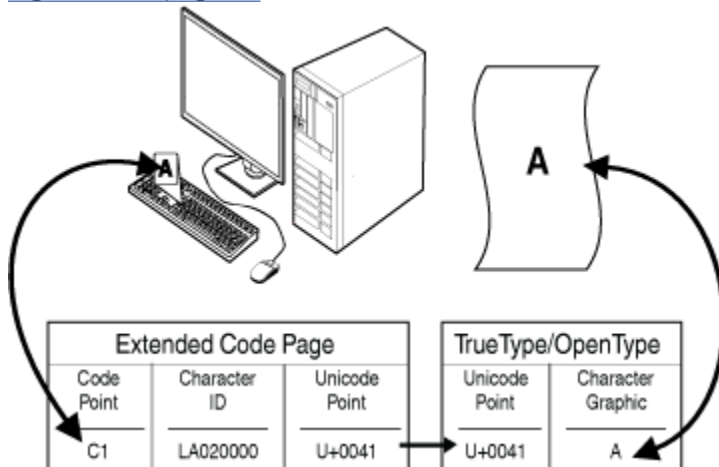

Figure 13: Translation of a keyboard character into a printed character by using an extended code page and a TrueType and OpenType font

Figure 14 on page 13 shows an example of a code page. In the example, when the printer receives hexadecimal code point C1 for code page T1V10037, it prints an uppercase A (character ID LA020000).

Figure 14: Code page T1V10037

Code pages for different languages

Code pages accommodate various national languages by using characters and special symbols appropriate to the language. Different code pages can have identical character IDs assigned to different code points. For example, the character é (lowercase e accent acute, character ID LE110000) has these code point assignments in two different code pages:

- Hexadecimal code point 51 in code page T1V10037 (Country Extended: United States, Canada)
- Hexadecimal code point 5A in code page T1V10280 (Country Extended: Italy)

Single-byte and double-byte code pages

A *single-byte code page* contains 256 or fewer 1-byte code points. Single-byte code pages are large enough for languages with alphabetic writing systems, such as English, Greek, and Arabic. A single-byte character set (SBCS) is used with a single-byte code page.

A *double-byte code page* can contain as many as 65,536 two-byte code points. Languages with non-alphabetic writing systems, such as Chinese, Japanese, and Korean, require double-byte code pages. A double-byte character set (DBCS) is used with a double-byte code page.

DBCSs contain some single-byte characters, usually romaji (Western characters) and katakana. Single-byte code pages are used with these characters. Because the characters are either half width (see “Font spacing characteristics” on page 5) or proportionally spaced, these code pages are sometimes called *half-width* code pages.

Code page sections

If you think of a double-byte code page as a collection of single-byte code pages, a double-byte character code has two parts: the first byte indicating a section of the code page and the second byte a code point in the section.

Raster coded fonts treat double-byte code pages this way: the coded font is divided into sections, each with its own single-byte code page. Each character in the section has a single-byte code point.

Outline coded fonts treat double-byte code pages as single, large code pages. Each character has a double-byte code point.

AFP font naming conventions

Font naming conventions identify a specific font and its characteristics. Each type of font has its own naming convention:

- WorldType fonts follow the naming convention in [“Naming conventions for WorldType fonts” on page 122](#).
- FOCA outline and raster fonts follow this convention for the names of each font component:

The first character in the name defines the font component:

C	Character set
T	Code page
X	Coded font

After the first character, the remainder of the name depends on the type of component:

- If the component is a code page, see [“Naming conventions for code pages” on page 107](#).
- If the component is a character set or coded font, the remainder of the name is based on the conventions for these font libraries:
 - General Library fonts (see [“Naming convention for General Library fonts” on page 17](#))
 - Chinese, Japanese, and Korean (CJK) fonts (see [“Naming conventions for CJK fonts” on page 26](#).)
 - CJK simulation fonts (see [“Naming conventions for CJK simulation fonts” on page 36](#))
 - AFP raster fonts (see [Chapter 5, “AFP raster fonts,” on page 45](#))

Character set and coded font names are usually distinctive and can be used to determine whether a font is a General Library font, a CJK font, or a raster font. For example, character sets and coded fonts are only six characters for outline fonts rather than eight characters for raster fonts. Code page names are usually not distinctive enough to determine for which font group the code page is supplied.

Formats of AFP character sets

The z/OS Font Collection supplies character sets in these formats:

240-pel raster

240-pel raster fonts are used on 240-pel printers. The resolution of these fonts is 240 dots per inch. All character positioning metrics in these fonts are expressed in whole-pel (fixed-metric) values.

300-pel raster

300-pel raster fonts are used on printers where the resolution is 300 dots per inch. The character positioning values are expressed in *relative metrics* and the exact pel count is determined at print time.

Type 1 outline

Type 1 outline is the format that is used with Type Transformer for General Library fonts. This format includes outlines of the various type families, which can be transformed for use by AFP printers in sizes of 1–999 points (AFP outline fonts) or 1–72 points (raster fonts).

CID-Keyed outline

CID-Keyed outline is the format that is used with Type Transformer for CJK fonts. This format includes outlines of the various type families, which can be transformed for use by AFP printers in sizes of 1–999.9 points (AFP outline fonts) or 1–72 points (raster fonts).

AFP outline

AFP outline is the format by which Print Services Facility (PSF) and other AFP applications can identify Type 1 outline fonts. The Type 1 outlines are encapsulated in FOCA wrappers that allow them to be accessed as AFP resources. AFP outline uses *relative metrics* in the same way as 300-pel fonts.

Fixed metrics

Fixed-metric fonts have all character positioning metrics that are expressed in whole-pel values. All 240-pel fonts are fixed-metric fonts. For example, the character increment of the A in 240-pel Helvetica Latin1 roman medium 10-point is 22 pels. When 240-pel fonts are created, any fractional pels that are found are eliminated by rounding up or down to whole-pel values.

Relative metrics

Relative metrics were developed for scalable outline fonts where a single metric value can be used to determine a pel value with a desired resolution and point size. Relative metrics are based on 1000 units per "em space," which means the fonts are designed for a hypothetical 1000 dpi, 72-point font where each side of the bounding box is 1000 pels. All AFP outlines and 300-pel fonts contain relative metrics. The exact pel values are determined when the font is used, such as during document formatting or printing. For example, the character increment for A in 300-pel Helvetica Latin1 roman medium is 667 relative units. In the hypothetical 1000 dpi, 72-point font, the A would have a character increment of 667 pels, but at 10 points and 300-dpi resolution, the character increment of the A is 27.8 pels. The fractional pel (.8 in this case) is accumulated by the printer and a whole white pel is inserted when the accumulator = 1. Constantly adjusting the character increments in this way makes sure that the output text is as close to the original outline specification as possible.

Chapter 4. AFP outline fonts

The AFP outline fonts that are included with the z/OS Font Collection are:

- General Library fonts
- Chinese, Japanese, and Korean (CJK) fonts
- CJK simulation fonts

General Library fonts

General Library fonts contain various typefaces and font sizes (including typographic and uniformly spaced typeface families) suitable for printing various documents. General Library fonts combine the IBM Core Interchange Fonts, IBM Coordinated Fonts, and IBM BookMaster® Fonts. All General Library fonts are derived from Adobe Type 1 font technology and are provided in the AFP outline format that is supported by AFP software for SBCS fonts.

Table 2 on page 17 shows the formats for General Library fonts that are provided in the z/OS Font Collection.

Format	Operating systems
AFP outline fonts	z/OS, IBM i, Linux, AIX®, Windows
Type 1	AIX, Windows

“Summary table for the General Library fonts” on page 19 lists General Library fonts by font type and language group.

Summary table for the General Library fonts

This information lists General Library fonts by font type and language group. These language groups identify supported languages for General Library fonts:

- The Arabic language group (International Organization for Standardization (ISO) 8859-6) includes Latin and Arabic scripts.
- The Cyrillic language group (ISO 8859-5) includes Bulgarian, Byelorussian, English, Macedonian, Russian, Serbo-Croatian, and Ukrainian.
- The Greek language group (ISO 8859-7) includes Latin and Greek scripts.
- The Hebrew language group (ISO 8859-8) includes Latin and Hebrew scripts.
- Katakana contains phonetic syllabic characters that are used for writing non-Japanese words, such as foreign names, borrowed words, or company names.
- The Lao language group provides support for the Lao language.
- The Latin language group includes Latin1 through Latin5 and Vietnamese.

- The Latin1 language group (ISO 8859-1) includes Danish, Dutch, English, Faroese, Finnish, French, German, Icelandic, Irish, Italian, Norwegian, Portuguese, Spanish, and Swedish. The Latin1 language group also provides the euro currency symbol and all Latin9 (ISO 8859-15) characters.
- The Latin2 language group (ISO 8859-2) includes Albanian, Czech, English, German, Hungarian, Polish, Romanian, Serbo-Croatian, Slovak, and Slovenian.
- The Latin3 language group (ISO 8859-3) includes Afrikaans, Catalan, Dutch, English, Esperanto, French, German, Italian, Maltese, Spanish, and Turkish.
- The Latin4 language group (ISO 8859-4) includes Danish, English, Finnish, French, German, Greenlandic, Lap, Latvian, Lithuanian, Estonian, and Norwegian.
- The Latin5 language group (ISO 8859-9) includes Danish, Dutch, English, Finnish, French, Irish, Italian, Norwegian, Portuguese, Spanish, Swedish, and Turkish.
- The Thai language group provides support for the Thai language.

Table 3 on page 20 provides this information for General Library fonts:

AFP typeface name

The IBM name for the typeface. Courier, Helvetica, and Times New Roman fonts contain characters for the ISO language groups.

Type 1 typeface name

The Type 1 outline font name for the typeface.

Style and weight

The style and weight of the font. Possible values are:

IB

Italic Bold

IM

Italic Medium

RB

Roman Bold

RM

Roman Medium

Character set identifier

A six-character name, with "CZ" as the prefix, that identifies an AFP outline character set.

Type 1 file name

The name of a Type 1 font that is used to create the AFP outline font. The file extensions are AFM, INF, and PFB.

GCSGID

The graphic character set global identifier (GCSGID) is a collection of characters that are registered with a unique number and sometimes used for font and code page selection.

FGID

The font typeface global identifier (FGID) is a number that is assigned to each typeface and is sometimes used for font selection.

CJK fonts

Chinese, Japanese, and Korean (CJK) fonts are derived from the Adobe CID-Keyed font technology and are available in AFP outline format. CJK fonts contain different typefaces that are suitable for printing various Chinese, Japanese, and Korean documents.

Naming conventions for CJK fonts

This information shows the naming conventions for CJK outline font character sets, CJK full-width fonts, and CJK half-width fonts.

CJK outline font character sets

The naming convention format for CJK outline font character sets is CZxxxx, where:

CZ

AFP outline character set prefix

xxxx

Language and typeface:

JHKG

Japanese Heisei Kaku Gothic

JHMG
Japanese Heisei Maru Gothic

JHMN
Japanese Heisei Mincho

HKG2
Korean Gothic

HSM2
Korean Myengjo

SFSG
Simplified Chinese Fang Song (GB)

SHEI
Simplified Chinese Hei (GB18030)

SKAI
Simplified Chinese Kai (GB)

SSNG
Simplified Chinese Song (GB18030)

TKAI
Traditional Chinese Kai

TSNG
Traditional Chinese Sung

CJK full-width fonts

The naming convention format for CJK full-width fonts is *aZtcpb*, where:

a

Component:

C

Character set

X

Coded font

Z

AFP outline

tc

Typestyle, country:

EF

Heisei Kaku Gothic, Japanese

KF

Heisei Mincho, Japanese

PF

Heisei Maru Gothic, Japanese

IF

Heisei Kaku Gothic, JIS X 0213:2004, Japanese

OF

Heisei Mincho, JIS X 0213:2004, Japanese

WF

Heisei Maru Gothic, JIS X 0213:2004, Japanese

GH

Gothic, Korean (Full Hangu: Korean Industrial Standard Code for information interchange (Hangu and Hanja) KSC 5700-199)

GK
Gothic, Korean (KS: Korean Industrial Standard Code for information interchange (Hangul and Hanja) KSC 5601-1989)

MH
Myengjo, Korean (Full Hangul)

MK
Myengjo, Korean (KS)

FP
Fang Song, Simplified Chinese (GB: Code of Chinese Graphic Character Set for Information Interchange GB 2312-80)

HP
Hei, Simplified Chinese (GB)

HS
Hei, Simplified Chinese (GB18030: Code of Chinese Graphic Character Set for Information Interchange GB 18030-2000)

JP

Summary tables for the CJK fonts

This informatin lists CJK fonts for these typefaces:

- Chinese:
 - Simplified Chinese (see [Table 4 on page 33](#)):
 - Fang Song (GB)
 - Hei (GB18030)
 - Kai (GB)
 - Song (GB18030)
 - Traditional Chinese (see [Table 5 on page 33](#)):
 - Kai
 - Sung
- Japanese (see [Table 6 on page 34](#)):
 - Japanese Heisei Kaku Gothic
 - Japanese Heisei Maru Gothic
 - Japanese Heisei Mincho
- Korean (see [Table 7 on page 35](#)):
 - Korean Gothic
 - Korean Myengjo

The summary tables for CJK fonts provide this information:

AFP/CID typeface name

The IBM name for the typeface.

CID file name

The name of the CID-Keyed font file that is used to create the AFP outline font. The file extensions are CID and CMP.

Weight

Possible values are: Light, Medium, Semi-Bold, and Semi-Light.

Width

The width of the font. Possible values are:

Full

Full-width

Half

Half-width

Coded font

A six-character name of the outline coded font, with "XZ" as the prefix, that identifies the combination of code page and character set.

Character set

A six-character name, with "CZ" as the prefix, that identifies an AFP outline character set.

Code page

A six-character name, with "T1" as the prefix, that identifies the code page.

GCSGID

The graphic character set global identifier (GCSGID) is a collection of characters that are registered with a unique number and sometimes used for font and code page selection.

FGID

The font typeface global identifier (FGID) is a number that is assigned to each typeface and is sometimes used for font selection.

Summary table for the CJK simulation fonts

This information lists CJK simulation fonts for these typefaces:

- Chinese:
 - Simplified Chinese:
 - Gothic simulated by Hei
 - Song simulated by Song
 - Traditional Chinese:
 - Gothic simulated by Sung
 - Ming simulated by Sung
- Japanese:
 - Gothic and Heisei Kaku Gothic simulated by Heisei Kaku Gothic
 - Round Gothic simulated by Heisei Maru Gothic
 - Mincho and Heisei Mincho simulated by Heisei Mincho
- Korean:
 - Gothic simulated by Gothic
 - Mincho simulated by Myengjo

The summary of the CJK simulation fonts in [Table 9 on page 41](#) provides this information:

CID file name

The name of the CID-Keyed font file that is used to create the AFP outline font. The file extensions are CID and CMP.

Wt

The font weight. Possible values are:

- L**
Light
- M**
Medium
- SB**
Semi-bold
- SL**
Semi-light

Width

The font width. Possible values are:

- Full**
Full-Width
- Half**
Half-Width

Coded font

A six-character name of the outline coded font, with "XZ" as the prefix, that identifies the combination of code page and character set.

Character set

A six-character name, with "CZ" as the prefix, that identifies an AFP outline character set.

Code page

A six-character name, with "T1" as the prefix, that identifies the code page.

GCSGID

The graphic character set global identifier (GCSGID) is a collection of characters that are registered with a unique number and sometimes used for font and code page selection.

FGID

The font typeface global identifier (FGID) is a number that is assigned to each typeface and is sometimes used for font selection.

Box size

The box size of the 240-pel fonts that are shown numerically as height by vertical (HxV) size.

Table 9: Summary of CJK simulation fonts								
CID file name	W t	Width	Coded font	Character set	Code page	GCSGID	FGID	Box size

Chapter 5. AFP raster fonts

Most AFP raster fonts are distinguished from AFP outline fonts because they have character set and coded font names that are 8 characters rather than 6 characters. The AFP raster fonts that are included with the z/OS Font Collection are:

- Single-byte character set (SBCS) expanded core fonts
- Double byte character set (DBCS) core fonts
- APL2, DATA1, Math, PI, and Sonoran fonts
- Compatibility fonts, which are also a feature of Print Services Facility (PSF) for z/OS (5655-M32) in Version 4 Release 5 and earlier.

SBCS fonts

SBCS expanded core fonts are part of the AFP raster fonts that are included with the z/OS Font Collection. The fonts contain various typefaces and font sizes (including typographic and uniformly spaced typeface families) and combine IBM Core Interchange Fonts, IBM Coordinated Fonts, and IBM BookMaster Fonts.

[Table 10 on page 45](#) shows the formats for SBCS fonts that are provided in the z/OS Font Collection.

Format	Operating systems
240-pel bounded-box fonts	z/OS, IBM i, Linux, AIX, Windows
300-pel fonts	z/OS, IBM i, Linux, AIX, Windows

“Summary table for SBCS fonts” on [page 55](#) lists SBCS fonts by font type and language group.

Naming conventions for SBCS fonts

The naming convention format for SBCS expanded core fonts is *afrstcpx*, where:

The seventh character in the naming convention format, *p*, represents the point size or pitch size of the font. The sizes of typographic and mixed-pitch fonts are expressed in points, which is a vertical measurement that indicates the general size of the font. One point is 1/72 inch. The sizes of uniformly spaced fonts are expressed in pitch, which is the number of characters that can be printed in 1 inch of text. Table 12 on page 54 shows the point and pitch sizes available for the SBCS font AFP typeface names. See Table 13 on page 56 for a list of SBCS fonts by font type, language group, and AFP typeface name.

AFP typeface name	Size in point or pitch
Courier APL2	10 pitch
Boutros Typing Arabic	6, 8.5, 10, 12, 15, and 17.1 pitch

Gothic Text Latin1	6, 8.5, 10, 12, 13.3, 15, 17.1, 20, and 24 pitch
Helvetica Latin1	6, 7, 8, 9, 10, 11, 12, 14, 16, 18, 20, 24, 30, and 36 points
Letter Gothic Latin1	6, 8.5, 10, 12, 15, 17.1 and 20 pitch
Prestige Latin1	6, 8.5, 10, 12, 15, and 17.1 pitch
Times New Roman Latin1	6, 7, 8, 9, 10, 11, 12, 14, 16, 18, 20, 24, 30, and 36 points
Courier Latin235	6, 8.5, 10, 12, 15, and 17.1 pitch
Helvetica Latin235	6, 7, 8, 9, 10, 11, 12, 14, 16, 18, 20, 24, 30, and 36 points
Times New Roman Latin235	6, 7, 8, 9, 10, 11, 12, 14, 16, 18, 20, 24, 30, and 36 points
Courier Latin4	6, 8.5, 10, 12, 15, and 17.1 pitch
Helvetica Latin4	6, 7, 8, 9, 10, 11, 12, 14, 16, 18, 20, 24, 30, and 36 points
Times new Roman Latin4	6, 7, 8, 9, 10, 11, 12, 14, 16, 18, 20, 24, 30, and 36 points

Table 12: Size in point or pitch for SBCS fonts (continued)

AFP typeface name	Size in point or pitch
OCRA	10 pitch
OCRB	10 pitch
Courier Lao	6, 8.5, 10, 12, 15, and 17.1 pitch
Pusuwan	6, 7, 8, 9, 10, 11, 12, 14, 16, 18, 20, 24, 30, and 36 points
Kaewfah	6, 7, 8, 9, 10, 11, 12, 14, 16, 18, 20, 24, 30, and 36 points
Courier Symbols	6, 8.5, 10, 12, 15, and 17.1 pitch
Helvetica Symbols	6, 7, 8, 9, 10, 11, 12, 14, 16, 18, 20, 24, 30, and 36 points
Times New Roman Symbols	6, 7, 8, 9, 10, 11, 12, 14, 16, 18, 20, 24, 30, and 36 points

Summary table for SBCS fonts

This information lists SBCS expanded core fonts by font type, language group, and AFP typeface name.

Table 13 on page 56 provides this information:

AFP typeface name

The IBM name for the typeface.

Type 1 typeface name

The Type 1 font name for the typeface.

Style and wt

The style and weight of the font. Possible values are:

IB

Italic Bold

IM

Italic Medium

RB

Roman Bold

RM

Roman Medium

Code page

An eight-character name, with "T1" as the prefix, that identifies the code page. Alphabetic script and symbol fonts use only single-byte code pages.

Character set identifier

An eight-character name that identifies an AFP raster character set.

Type 1 file name

The name of a Type 1 font that is used to create the AFP raster font. The file extensions are AFM, INF, and PFB.

Coded font identifier

An eight-character name of the raster coded font that identifies the combination of code page and character set. IBM BookMaster fonts do not have a coded font identifier because BookMaster does not use coded fonts.

Alternate coded font identifier

A six-character coded font name for certain operating environments, such as JES, that limit coded font identifiers to six characters; for example, X0GT10. All SBCS fonts with a coded font identifier also have an alternate coded font identifier.

GCSGID

The graphic character set global identifier (GCSGID) is a collection of characters that are registered with a unique number and sometimes used for font and code page selection.

FGID

The font typeface global identifier (FGID) is a number that is assigned to each typeface and is sometimes used for font selection.

DBCS fonts

DBCS core fonts are part of the AFP raster fonts that are included with the z/OS Font Collection. The fonts contain different typefaces that are suitable for printing various Chinese, Japanese, and Korean (CJK) documents. CJK fonts are derived from the Adobe CID-Keyed font technology.

DBCS fonts are provided in 240-pel bounded-box font formats for the z/OS, IBM i, AIX, Linux, and Windows operating systems.

[“Summary table for DBCS fonts” on page 73](#) lists DBCS fonts by CJK typeface.

Naming conventions for DBCS fonts

This information shows the naming conventions for DBCS full-width and half-width raster coded fonts and character sets. It also shows the size groups that include the point and box sizes of fonts.

DBCS full-width fonts

The naming convention format for DBCS full-width fonts is *a0tcbss*, where:

Point and box sizes for DBCS fonts

The *pb* characters in the naming convention format represent the point size and box size of the font. The point size and box size that can be used with a font are determined by the size group that is assigned to the font. Table 14 on page 73 shows whether a *pb* point size and box size is in size group 1, size group 2, or both. [“Summary table for DBCS fonts” on page 73](#) shows the size groups that are assigned to the DBCS fonts.

Table 14: Size groups for DBCS font point sizes and box sizes

pb	Point size	Box size	Size group 1	Size group 2
60	6.0	20	X	
72	7.2	24	X	X
84	8.4	28	X	
96	9.6	32	X	X
08	10.8	36	X	
B0	12.0	40	X	
C8	13.8	46	X	
E6	15.6	52	X	
H0	18.0	60	X	
J4	20.4	68	X	
N0	30.0	80	X	

Summary table for DBCS fonts

This information lists DBCS core fonts for these typefaces:

- Chinese:
 - Simplified Chinese:
 - GB Fang Song
 - GB Hei
 - GB Kai
 - GBK Song
 - Traditional Chinese:
 - Kai
 - Sung
- Japanese:
 - Japanese Heisei Kaku Gothic
 - Japanese Heisei Maru Gothic
 - Japanese Heisei Mincho
- Korean:
 - Gothic
 - Myengjo

Table 15 on page 74 provides this information:

AFP/CID typeface name

The IBM name for the typeface.

CID file name

The name of the CID-Keyed font file that is used to create the font. The file extensions are CID and CMP.

Wt

The weight of the font. Possible values are:

- L**
Light
- M**
Medium
- SB**
Semi-bold
- SL**
Semi-light

Width

The width of the font. Possible values are:

- Full**
Full-width
- Half**
Half-width

Coded font

A six-character name of the font, with "X0" as the prefix, that identifies the combination of code page and character set.

Character set

An eight-character name, with "C0" as the prefix, that identifies an AFP raster character set.

Code page

An eight-character name, with "T1" as the prefix, that identifies the code page.

GCSGID

The graphic character set global identifier (GCSGID) is a collection of characters that are registered with a unique number and sometimes used for font and code page selection.

FGID

The font typeface global identifier (FGID) is a number that is assigned to each typeface and is sometimes used for font selection.

Size group

The group that defines what point size and box size the font can use (see [Table 14 on page 73](#)).

<i>Table 15: Summary of DBCS fonts</i>

APL2, DATA1, Math, PI, and Sonoran fonts

This information lists the APL2, DATA1, Math, PI, and Sonoran 240-pel raster fonts that are included in the z/OS Font Collection.

Table 16 on page 78 provides this information:

Font name

The name of the font.

Code page

An eight-character name, with "T1" as the prefix, that identifies the code page.

GCSGID

The graphic character set global identifier (GCSGID), which is a collection of characters that are registered with a unique number and sometimes used for font and code page selection.

CPGID

The code page global identifier (CPGID), which is a number that is registered by IBM to uniquely identify each code page.

Width

The width of the font. Values are:

M

Medium

SB

Semi-bold

Wt

The weight of the font. Values are:

B

Bold

I

Italic

IB

Italic Bold

M

Medium

Coded font

A 6-8 character name of the font, with "Xn" as the prefix, that identifies the combination of code page and character set. Values are:

n

The format and orientation. Values are:

0

Bounded-box format

1, 2

Unbounded-box format

y

The suffix of the name, which is either C or I.

Character set

An eight-character name, with "Cn" as the prefix, that identifies an AFP raster character set. The values for *n* are:

0

Bounded-box format

1, 2

Unbounded-box format

Vertical size

The maximum vertical size of the font in points.

Compatibility fonts

Compatibility fonts are part of the AFP raster fonts that are shipped with the z/OS Font Collection. Compatibility fonts include uniformly spaced, mixed-pitch, and Proprinter Emulation fonts. Uniformly spaced fonts are measured horizontally in pitch. Proportionally spaced and mixed-pitch fonts are measured vertically in points. Compatibility fonts are provided in these formats:

- 240-pel bounded-box
- 240-pel unbounded-box
- 300-pel

“Summary table for compatibility fonts” on page 98 lists compatibility fonts by font type.

Naming conventions for compatibility fonts

The naming convention format for compatibility fonts is *afo0ttnn* or *afo0py*, where:

a

Component:

C

Character set

X

Coded font

f

Format:

0

Bounded-box and 300-pel

1, 2

Unbounded-box

o

Font origin for original fonts and original printer:

D
DCF Release 2 fonts; 3800 Model 1 printer

L
Library character sets; 3800 Model 1 printer

S
6670 fonts; 6670 information printer

o
Uniformly spaced or mixed-pitch font components

ttnn
Type family, typeface, and pitch of font (see [Table 17 on page 97](#))

p
Pitch exception for coded fonts:

Migration code pages

0
10 pitch

2
12 pitch

5
15 pitch

8
18 pitch

Country extended code pages

0
10 pitch

E
12 pitch

5
15 pitch

8
18 pitch

y
Code page exception for coded fonts:

Compatibility font NLS code pages

A
T1DABASE Austria, Germany

B
T1DBBASE Belgium, Switzerland, Luxembourg

D
T1DDBASE Denmark, Norway, Iceland

E
T1DEBASE Finland, Sweden

Summary table for compatibility fonts

Table 18 on page 99 provides this information:

AFP typeface name

The IBM name for the typeface.

Style and weight

The style and weight of the font. Possible values are:

IB

Italic Bold

IM

Italic Medium

RB

Roman Bold

RC

Roman Condensed

RL

Roman Light

RM

Roman Medium

RSL

Roman Semi-Light

Code page

An eight-character name, with "T1" as the prefix, that identifies the code page. Alphabetic script and symbol fonts use only single-byte code pages.

Character set identifier

An eight-character name that identifies an AFP raster character set.

Coded font identifier

A 5-8 character name of the raster coded font that identifies the combination of code page and character set.

GCSGID

The graphic character set global identifier (GCSGID) is a collection of characters that are registered with a unique number and sometimes used for font and code page selection.

FGID

The font typeface global identifier (FGID) is a number that is assigned to each typeface and is sometimes used for font selection.

Size

The size of the font in pitch or points. **MP** stands for mixed pitch.

<i>Table 18: Summary of compatibility fonts</i>

Chapter 6. Code pages and extended code pages

A code page maps each character of text to the characters in a character set or to the characters associated to a Unicode point. Two types of code pages exist:

- A *traditional code page* includes EBCDIC or ASCII encodings only; it can be used with FOCA character sets and TrueType and OpenType fonts.
- An *extended code page* includes multiple encodings within a single code page and can contain EBCDIC or ASCII encodings along with the Unicode equivalent value; it can be used with TrueType and OpenType fonts.

AFP outline fonts and AFP raster fonts use traditional code pages to map each character of text to the characters in a character set. TrueType and OpenType fonts use traditional and extended code pages to map each character of text to the characters associated with a Unicode point.

Each code point in an extended code page can be mapped to one or more Unicode values. Extended code pages allow code pages that contain user-defined characters (that is, those characters that are not registered with IBM and assigned a GCGID value) to be used with TrueType and OpenType fonts.

Table 19 on page 107 shows the extended code page files that you can download from [IBM Extended Code Pages \(ECPs\) zip files](http://www.ibm.com/support/docview.wss?uid=psd1P4000878) (www.ibm.com/support/docview.wss?uid=psd1P4000878).

Font library	Extended code page file
General	eCP_gl.zip
Japanese	eCP_japan.zip
Korean	eCP_korea.zip
Simplified Chinese	eCP_chs.zip
Traditional Chinese	eCP_cht.zip

“Summary tables for code pages” on page 110 lists code pages and extended code pages in the z/OS Font Collection.

Naming conventions for code pages

All AFP code page names begin with T1, which makes them recognizable as code pages. This information shows the naming conventions for code pages and extended code pages that are used with these font library character sets:

- General Library (outline fonts) and SBCS (expanded core raster fonts)
- CJK (outline fonts) and DBCS (core raster fonts) with full-width characters
- CJK (outline fonts) and DBCS (core raster fonts) with half-width characters

Code pages for General Library and SBCS fonts

The last 6 characters of the code page name are used to identify the code page for General Library and SBCS fonts. The preferred naming convention is where the first 2 characters are 00, V1, or B0, and the final 4 characters are the code page global identifier (CPGID), which is a number that is registered by IBM to uniquely identify each code page.

Table 20 on page 108 shows the naming convention for code pages that are used with General Library outline font character sets and SBCS raster font character sets. The naming convention format is T1yyyyyy.

Table 20: Naming convention for General Library and SBCS fonts

T1	yyyyyy
AFP code page prefix	<p>Code page identifier:</p> <p>00nnnn Expanded core code pages; <i>nnnn</i> is the CPGID.</p> <p>V1nnnn Expanded core code pages; <i>nnnn</i> is the CPGID.</p> <p>B00nnn BookMaster code pages; <i>0nnn</i> is the CPGID.</p> <p>Dxnnnn DCF-related code pages</p> <p>DxBASE Migration code pages</p> <p>GDPnnn Data processing code pages</p> <p>GE0nnn Sonoran Display and Sonoran Petite code pages</p> <p>GI0nnn General code pages</p> <p>GP0nnn General-purpose code pages</p> <p>L0nnnn LCS-related code pages</p> <p>M00nnn Mathematics code pages</p> <p>S0nnnn 6670-related code pages</p> <p>SKBnnn Standard keyboard code pages</p>

Code pages with full-width characters for CJK and DBCS fonts

The names of code pages that use full-width characters are typically 6 characters for CJK outline fonts and 8 characters for DBCS raster fonts.

Table 21 on page 109 shows the naming convention for code pages that are used with CJK and DBCS full-width character sets. The naming convention format is T1xxxxss.

Table 21: Naming convention for code pages that use full-width characters

T1	XXXX	SS
AFP code page prefix	<p>Code page global identifier (CPGID), with these exceptions</p> <p>0300 Japanese JIS X 0213:2000 code page for CPGID:65280</p> <p>K300 Japanese JIS X 0213:2004 code page for CPGID:0300</p> <p>I300 Japanese IBM JIKEI code page for CPGID:65281</p> <p>J300 Japanese IBM JIKEI with JIS90 code page is for CPGID:65282</p> <p>0834 Korean KS code page for CPGID:65283</p> <p>K834 Korean Full Hangul code page for CPGID:0834</p> <p>0835 Traditional Chinese code page for CPGID:0835</p> <p>0837 Simplified Chinese GB code page for CPGID:65284</p> <p>K837 Simplified Chinese GB18030 code page is for CPGID:0837</p>	Section number for a code page that is used with a raster font.

Code pages with half-width characters for CJK and DBCS fonts

The names of code pages that use half-width characters typically have H0 as the third and fourth characters.

Table 22 on page 109 shows the naming convention for code pages that are used with CJK and DBCS half-width character sets. The naming convention format is T1Hnxxxx.

Table 22: Naming convention for code pages that use half-width characters

T1	Hn	XXXX
AFP code page prefix	<p>H0 Typically used to represent half-width font.</p> <p>HK Used for Japanese CPGID:0037,00290 and Simplified Chinese CPGID:1114.</p>	Code page global identifier (CPGID)

Summary tables for code pages

This information lists code pages and extended code pages that are supported in these font libraries:

- General, includes General Library and SBCS (see [Table 23 on page 110](#))
- Japanese (see [Table 24 on page 118](#))
- Korean (see [Table 25 on page 119](#))
- Simplified Chinese (see [Table 26 on page 119](#))
- Traditional Chinese (see [Table 27 on page 120](#))

The summary tables for code pages provide this information:

Code page ID

A six- or eight-character name, with "T1" as the prefix, that identifies the code page.

CDP

An "X" indicates that the code page is supplied as a traditional code page.

ECP

An "X" indicates that the code page is supplied as an extended code page.

Description

The description of the code page.

Chapter 7. WorldType fonts

WorldType fonts are TrueType and OpenType fonts that are supplied in a Microsoft Unicode format. The WorldType fonts include these typefaces:

- WorldType Sans
- WorldType SansDuo
- WorldType Serif
- WorldType SerifDuo

Unicode ranges

The WorldType fonts are organized by subsets and grouped by character blocks as defined by Unicode. These subsets do not fully support all glyphs in every character block and might contain glyphs from other characters blocks:

- Windows Glyph List (WGL) is a subset that supports Latin, Greek, Cyrillic, Modified Letters and Combining Marks. It has partial support for Symbols and glyphs in the Special Area. This subset provides the same basic set of characters as Microsoft Windows Glyph List 4.
- Middle East Glyph List is a subset that supports Arabic and Hebrew in addition to the WGL support.
- Indic Glyph List is a subset that supports Indic scripts in addition to the WGL support.
- Southeast Asian Glyph List is a subset that supports Thai, Lao, Khmer, and Vietnamese in addition to the WGL support.
- Complete Glyph List contains every character presently supported. In addition to WGL, Middle East, and Indic support, it supports Han, Hiragana, Katakana, Hangul, Bopomofo and Yi.

Localizations

The Complete Glyph List is available with Han localizations for Japanese, Korean, Simplified Chinese, and Traditional Chinese. There is a 64K glyph limit in the TrueType and OpenType font architecture that limits the amount of support that can be provided with a single font. This limitation requires a different font to be selected to properly represent each locale.

The set of Han glyphs is not fully localized for all four locales. Each of the localizations support the Windows 98 glyph set for a particular locale. The Simplified Chinese locale is the only uniform designed glyph set. There are fallback glyphs in the other locales for those not supported. For example, if a glyph is specified that is not part of the Windows 98 Japanese glyph set, the Simplified Chinese glyph is used for that particular glyph.

Embedded bitmaps

The Complete Glyph List is available with embedded bitmaps. The embedded bitmaps are provided for many of the Han, Hiragana, and Katakana glyphs. These bitmaps improve the quality of the glyph at screen resolutions.

The level of embedded bitmap support is based upon the Windows 95 glyph set. There are six bitmap sizes included in the fonts. Each bitmap size is designed to represent the locale and the type style, except for the smallest bitmap, which is too small to distinguish the difference.

Naming conventions for WorldType fonts

The WorldType font file naming convention uses the format *tttllsb* with the definitions listed in [Table 28](#) on page 122 and [Table 29](#) on page 122. *ttt* identifies the typeface name and *llsb* identifies the localization, subset, and whether embedded bitmaps are present.

ttt	Typeface name
wt__	WT Serif
wt_d	WT SerifDuo
wts_	WT Sans
wtsd	WT SansDuo

llsb	Typeface name appendage	Description	Bitmaps
i___	IN	Indic	No
j__b	J	Japanese	Yes
j_eb	J EA	Japanese East Asian	Yes
k__b	K	Korean	Yes
k_eb	K EA	Korean East Asian	Yes
m___	ME	Middle East	No
s__b	SC	Simplified Chinese	Yes
s_eb	SC EA	Simplified Chinese East Asian	Yes
sxb_	SC xB	Simplified Chinese-Extension B	No
sea_	SEA	Southeast Asia	No
th_b	HK	Traditional Chinese Hong Kong	Yes
theb	HK EA	Traditional Chinese Hong Kong East Asian	Yes
tt_b	TW	Traditional Chinese Taiwan	Yes
tteb	TW EA	Traditional Chinese Taiwan East Asian	Yes
w___		Windows Glyph List 4	No

Highlights for WorldType fonts

This information describes the highlights for the latest version of the WorldType fonts that are contained in the z/OS Font Collection.

Version 8.2 of the WorldType fonts has these updates:

- These characters are corrected:

- Bopomofo letter I (U+3127)
- Kannada vowel sign AI (U+0CC8)
- Kannada AI length mark (U+0CD6)
- Arabic Letter Feh with dot below (U+06A3)
- These characters are new:
 - Arabic Letter Mark (U+061C) for text formatting
 - Currency symbols:
 - Azerbaijani Manat (U+20BC)
 - Russian Ruble (U+20BD)
 - Georgia Lari (U+20BE)
 - Simplified Chinese Basic Multilingual Plane (BMP) Unicode code points are added in the FULL and East Asian EA WorldType fonts. The new characters are provided in bitmap and outline formats in the Song and Hei styles.

9FCC	9FCD	9FCE	9FCF	9FD0	9FD1	9FD2	9FD3	9FD4	9FD5
------	------	------	------	------	------	------	------	------	------

- Lao OpenType features
- Simplified Chinese Extension C, D, and E Unicode code points are added in the WT SansDuo SC xB font. The new code points are only provided in outline format in the Hei style.
 - Simplified Chinese Extension C Unicode code points

Summary tables for WorldType fonts

This information lists summary tables for Version 8.1 base and link WorldType fonts. It also includes a summary table of symbolic links for upgrading to the latest version of WorldType fonts.

Base fonts

Table 30 on page 124 provides this information for base WorldType fonts:

Full font name

The combination of the font family name and the font subfamily name.

File name

The name of the font file with a file extension of . ttf.

Localization

The view preference of the glyph shapes.

Glyph List

The set of glyphs that is contained in the font.

Bitmaps

An indicator of whether the font contains embedded bitmaps for better screen resolution quality.

The style and weight of all WorldType fonts is Roman Medium.

Full font name	File name	Localization	Glyph List	Bitmaps
WT Sans	wts_w_ . ttf	N/A	Windows Glyph List (WGL)	No
WT Sans HK	wts_th_b. ttf	Traditional Chinese Hong Kong	Complete	Yes
WT Sans HK EA	wts_theb. ttf	Traditional Chinese Hong Kong	East Asian	Yes
WT Sans IN	wts_i_ . ttf	N/A	Indic	No
WT Sans J	wts_j__b. ttf	Japanese	Complete	Yes
WT Sans J EA	wts_j_ . eb. ttf	Japanese	East Asian	Yes
WT Sans K	wts_k__b. ttf	Korean	Complete	Yes
WT Sans K EA	wts_k_ . eb. ttf	Korean	East Asian	Yes
WT Sans ME	wts_m_ . ttf	N/A	Middle East	No
WT Sans SC	wts_s__b. ttf	Simplified Chinese	Complete	Yes
WT Sans SC EA	wts_s_ . eb. ttf	Simplified Chinese	East Asian	Yes
WT Sans SEA	wts_sea_ . ttf	N/A	Southeast Asian	No
WT Sans TW	wts_tt_b. ttf	Traditional Chinese Taiwan	Complete	Yes
WT Sans TW EA	wts_tteb. ttf	Traditional Chinese Taiwan	East Asian	Yes
WT SansDuo	wtsdw_ . ttf	N/A	WGL	No
WT SansDuo HK	wtsdth_b. ttf	Traditional Chinese Hong Kong	Complete	Yes
WTSans Duo HK EA	wtsdtheb. ttf	Traditional Chinese Hong Kong	East Asian	Yes

WT SerifDuo TW	wt_dtt_b.ttf	Traditional Chinese Taiwan	Complete	Yes
WT Serif Duo TW EA	wt_dtteb.ttf	Traditional Chinese Taiwan	East Asian	Yes

Link fonts

Link fonts are searched when the Unicode value is not found in the base font, which extends the base font. The link font is included as a base font. [Table 31 on page 126](#) defines the link fonts added to the resource access table (RAT) for WorldType fonts. It provides this information:

Full font name

The combination of the font family name and the font subfamily name for the base font or the linked font.

File name

The name of the base or linked font file with a file extension of .ttf.

Table 31: Summary of link WorldType fonts

Base Font		Link Font	
Full font name	File name	Full font name	File name
WT SansDuo SC	wt_sds__b.ttf	WT SansDuo SC xB	wt_sdsxb_.ttf
WT Sans SC	wt_s_s__b.ttf

WT Serif SC	wt__s__b.ttf		

Symbolic links

To upgrade to the latest version of WorldType fonts, you can use the symbolic links that are found in this directory:

/usr/lpp/fonts/worldtype

[Table 32 on page 126](#) defines the symbolic links for the latest version of WorldType fonts. It provides this information:

Earlier version file name

The file name for an earlier version WorldType font.

Latest version file name

The file name for the latest version WorldType font.

Appendix A. Accessibility

Accessible publications for this product are offered through [IBM Knowledge Center \(www.ibm.com/support/knowledgecenter/SSLTBW/welcome\)](http://www.ibm.com/support/knowledgecenter/SSLTBW/welcome).

If you experience difficulty with the accessibility of any z/OS information, send a detailed email message to mhvrcfs@us.ibm.com.

Accessibility features

Accessibility features help users who have physical disabilities such as restricted mobility or limited vision use software products successfully. The accessibility features in z/OS can help users do the following tasks:

- Run assistive technology such as screen readers and screen magnifier software.
- Operate specific or equivalent features by using the keyboard.
- Customize display attributes such as color, contrast, and font size.

Consult assistive technologies

Assistive technology products such as screen readers function with the user interfaces found in z/OS. Consult the product information for the specific assistive technology product that is used to access z/OS interfaces.

Keyboard navigation of the user interface

You can access z/OS user interfaces with TSO/E or ISPF. The following information describes how to use TSO/E and ISPF, including the use of keyboard shortcuts and function keys (PF keys). Each guide includes the default settings for the PF keys.

- [*z/OS TSO/E Primer*](#)
- [*z/OS TSO/E User's Guide*](#)
- [*z/OS ISPF User's Guide Vol I*](#)

Dotted decimal syntax diagrams

Syntax diagrams are provided in dotted decimal format for users who access IBM Knowledge Center with a screen reader. In dotted decimal format, each syntax element is written on a separate line. If two or more syntax elements are always present together (or always absent together), they can appear on the same line because they are considered a single compound syntax element.

Each line starts with a dotted decimal number; for example, 3 or 3.1 or 3.1.1. To hear these numbers correctly, make sure that the screen reader is set to read out punctuation. All the syntax elements that have the same dotted decimal number (for example, all the syntax elements that have the number 3.1) are mutually exclusive alternatives. If you hear the lines 3.1 USERID and 3.1 SYSTEMID, your syntax can include either USERID or SYSTEMID, but not both.

The dotted decimal numbering level denotes the level of nesting. For example, if a syntax element with dotted decimal number 3 is followed by a series of syntax elements with dotted decimal number 3.1, all the syntax elements numbered 3.1 are subordinate to the syntax element numbered 3.

Certain words and symbols are used next to the dotted decimal numbers to add information about the syntax elements. Occasionally, these words and symbols might occur at the beginning of the element itself. For ease of identification, if the word or symbol is a part of the syntax element, it is preceded by the backslash (\) character. The * symbol is placed next to a dotted decimal number to indicate that the syntax element repeats. For example, syntax element *FILE with dotted decimal number 3 is given the format 3 * FILE. Format 3* FILE indicates that syntax element FILE repeats. Format 3* * FILE indicates that syntax element * FILE repeats.

Characters such as commas, which are used to separate a string of syntax elements, are shown in the syntax just before the items they separate. These characters can appear on the same line as each item, or on a separate line with the same dotted decimal number as the relevant items. The line can also show another symbol to provide information about the syntax elements. For example, the lines 5.1*, 5.1 LASTRUN, and 5.1 DELETE mean that if you use more than one of the LASTRUN and DELETE syntax elements, the elements must be separated by a comma. If no separator is given, assume that you use a blank to separate each syntax element.

If a syntax element is preceded by the % symbol, it indicates a reference that is defined elsewhere. The string that follows the % symbol is the name of a syntax fragment rather than a literal. For example, the line 2.1 %OP1 means that you must refer to separate syntax fragment OP1.

The following symbols are used next to the dotted decimal numbers.

? indicates an optional syntax element

The question mark (?) symbol indicates an optional syntax element. A dotted decimal number followed by the question mark symbol (?) indicates that all the syntax elements with a corresponding dotted decimal number, and any subordinate syntax elements, are optional. If there is only one syntax element with a dotted decimal number, the ? symbol is displayed on the same line as the syntax element, (for example 5? NOTIFY). If there is more than one syntax element with a dotted decimal number, the ? symbol is displayed on a line by itself, followed by the syntax elements that are optional. For example, if you hear the lines 5 ?, 5 NOTIFY, and 5 UPDATE, you know that the syntax elements NOTIFY and UPDATE are optional. That is, you can choose one or none of them. The ? symbol is equivalent to a bypass line in a railroad diagram.

! indicates a default syntax element

The exclamation mark (!) symbol indicates a default syntax element. A dotted decimal number followed by the ! symbol and a syntax element indicate that the syntax element is the default option for all syntax elements that share the same dotted decimal number. Only one of the syntax elements that share the dotted decimal number can specify the ! symbol. For example, if you hear the lines 2? FILE, 2.1! (KEEP), and 2.1 (DELETE), you know that (KEEP) is the default option for the FILE keyword. In the example, if you include the FILE keyword, but do not specify an option, the default option KEEP is applied. A default option also applies to the next higher dotted decimal number. In this example, if the FILE keyword is omitted, the default FILE(KEEP) is used. However, if you hear the lines 2? FILE, 2.1, 2.1.1! (KEEP), and 2.1.1 (DELETE), the default option KEEP applies only to the next higher dotted decimal number, 2.1 (which does not have an associated keyword), and does not apply to 2? FILE. Nothing is used if the keyword FILE is omitted.

*** indicates an optional syntax element that is repeatable**

The asterisk or glyph (*) symbol indicates a syntax element that can be repeated zero or more times. A dotted decimal number followed by the * symbol indicates that this syntax element can be used zero or more times; that is, it is optional and can be repeated. For example, if you hear the line 5.1* data area, you know that you can include one data area, more than one data area, or no data area. If you hear the lines 3* , 3 HOST, 3 STATE, you know that you can include HOST, STATE, both together, or nothing.

Notes:

1. If a dotted decimal number has an asterisk (*) next to it and there is only one item with that dotted decimal number, you can repeat that same item more than once.
2. If a dotted decimal number has an asterisk next to it and several items have that dotted decimal number, you can use more than one item from the list, but you cannot use the items more than once each. In the previous example, you can write HOST STATE, but you cannot write HOST HOST.

3. The * symbol is equivalent to a loopback line in a railroad syntax diagram.

+ indicates a syntax element that must be included

The plus (+) symbol indicates a syntax element that must be included at least once. A dotted decimal number followed by the + symbol indicates that the syntax element must be included one or more times. That is, it must be included at least once and can be repeated. For example, if you hear the line 6.1+ data area, you must include at least one data area. If you hear the lines 2+, 2 HOST, and 2 STATE, you know that you must include HOST, STATE, or both. Similar to the * symbol, the + symbol can repeat a particular item if it is the only item with that dotted decimal number. The + symbol, like the * symbol, is equivalent to a loopback line in a railroad syntax diagram.

Notices

This information was developed for products and services that are offered in the USA or elsewhere.

IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

Such information may be available, subject to appropriate terms and conditions, including in some cases, payment of a fee.

The licensed program described in this document and all licensed material available for it are provided by IBM under terms of the IBM Customer Agreement, IBM International Program License Agreement or any equivalent agreement between us.

Any performance data contained herein was determined in a controlled environment. Therefore, the results obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems and there is no guarantee that these measurements will be the same on generally available systems. Furthermore, some measurements may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

All statements regarding IBM's future direction or intent are subject to change or withdrawal without notice, and represent goals and objectives only.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

COPYRIGHT LICENSE:

This information contains sample application programs in source language, which illustrate programming techniques on various operating platforms. You may copy, modify, and distribute these sample programs in any form without payment to IBM, for the purposes of developing, using, marketing or distributing application programs conforming to the application programming interface for the operating platform for which the sample programs are written. These examples have not been thoroughly tested under all conditions. IBM, therefore, cannot guarantee or imply reliability, serviceability, or function of these programs. The sample programs are provided "AS IS", without warranty of any kind. IBM shall not be liable for any damages arising out of your use of the sample programs.

Terms and conditions for product documentation

Permissions for the use of these publications are granted subject to the following terms and conditions.

Applicability

These terms and conditions are in addition to any terms of use for the IBM website.

Personal use

You may reproduce these publications for your personal, noncommercial use provided that all proprietary notices are preserved. You may not distribute, display or make derivative work of these publications, or any portion thereof, without the express consent of IBM.

Commercial use

You may reproduce, distribute and display these publications solely within your enterprise provided that all proprietary notices are preserved. You may not make derivative works of these publications, or

reproduce, distribute or display these publications or any portion thereof outside your enterprise, without the express consent of IBM.

Rights

Except as expressly granted in this permission, no other permissions, licenses or rights are granted, either express or implied, to the publications or any information, data, software or other intellectual property contained therein.

IBM reserves the right to withdraw the permissions granted herein whenever, in its discretion, the use of the publications is detrimental to its interest or, as determined by IBM, the above instructions are not being properly followed.

You may not download, export or re-export this information except in full compliance with all applicable laws and regulations, including all United States export laws and regulations.

IBM MAKES NO GUARANTEE ABOUT THE CONTENT OF THESE PUBLICATIONS. THE PUBLICATIONS ARE PROVIDED "AS-IS" AND WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO IMPLIED WARRANTIES OF MERCHANTABILITY, NON-INFRINGEMENT, AND FITNESS FOR A PARTICULAR PURPOSE.

IBM Online Privacy Statement

IBM Software products, including software as a service solutions, ("Software Offerings") may use cookies or other technologies to collect product usage information, to help improve the end user experience, to tailor interactions with the end user, or for other purposes. In many cases no personally identifiable information is collected by the Software Offerings. Some of our Software Offerings can help enable you to collect personally identifiable information. If this Software Offering uses cookies to collect personally identifiable information, specific information about this offering's use of cookies is set forth below.

Depending upon the configurations deployed, this Software Offering may use session cookies that collect each user's name, email address, phone number, or other personally identifiable information for purposes of enhanced user usability and single sign-on configuration. These cookies can be disabled, but disabling them will also eliminate the functionality they enable.

If the configurations deployed for this Software Offering provide you as customer the ability to collect personally identifiable information from end users via cookies and other technologies, you should seek your own legal advice about any laws applicable to such data collection, including any requirements for notice and consent.

For more information about the use of various technologies, including cookies, for these purposes, see IBM's Privacy Policy at ibm.com/privacy and IBM's Online Privacy Statement at ibm.com/privacy/details in the section entitled "Cookies, Web Beacons and Other Technologies," and the "IBM Software Products and Software-as-a-Service Privacy Statement" at ibm.com/software/info/product-privacy.

Policy for unsupported hardware

Various z/OS elements, such as DFSMS, JES2, JES3, and MVS™, contain code that supports specific hardware servers or devices. In some cases, this device-related element support remains in the product even after the hardware devices pass their announced End of Service date. z/OS may continue to service element code; however, it will not provide service related to unsupported hardware devices. Software problems related to these devices will not be accepted for service, and current service activity will cease if a problem is determined to be associated with out-of-support devices. In such cases, fixes will not be issued.

Minimum supported hardware

The minimum supported hardware for z/OS releases identified in z/OS announcements can subsequently change when service for particular servers or devices is withdrawn. Likewise, the levels of other software products supported on a particular release of z/OS are subject to the service support lifecycle of those products. Therefore, z/OS and its product publications (for example, panels, samples, messages, and product documentation) can include references to hardware and software that is no longer supported.

- For information about software support lifecycle, see: [IBM Lifecycle Support for z/OS \(www.ibm.com/software/support/systemsz/lifecycle\)](http://www.ibm.com/software/support/systemsz/lifecycle)
- For information about currently-supported IBM hardware, contact your IBM representative.

Trademarks

IBM, the IBM logo, and ibm.com are trademarks or registered trademarks of International Business Machines Corporation in the United States, other countries, or both. If these and other IBM trademarked terms are marked on their first occurrence in this information with a trademark symbol (® or ™), these symbols indicate U.S. registered or common law trademarks owned by IBM at the time this information was published. Such trademarks may also be registered or common law trademarks in other countries. A current list of IBM trademarks is available at [Copyright and Trademark information \(www.ibm.com/legal/copytrade.shtml\)](http://www.ibm.com/legal/copytrade.shtml).

Adobe is either a registered trademark or a trademark of Adobe Systems Incorporated in the United States and/or other countries.

Linux is a registered trademark of Linus Torvalds in the United States, other countries, or both.

Microsoft and Windows are trademarks of Microsoft Corporation in the United States, other countries, or both.

UNIX is a registered trademark of The Open Group in the United States and other countries.
